

You can't protect
what you don't know
you have.

Continuous Asset Discovery

Digital transformation that enables business also represents a considerable risk if not configured and managed securely. Security teams need visibility into what is internet exposed and how it is configured. Simply put, you can't protect what you don't know about.

Complete Visibility of Your External Footprint

With continuous, high frequency discovery the Continuous Security Platform establishes technical links, identifying and mapping all assets associated with your organisation, presenting them in a logical manner with hierarchical organisation and role based access control.

Know the Unknown Unknowns

It's the things we don't know, we don't know, that get us in the most trouble. Applied best practices are great protection, when applied - when they aren't you want to know.

Close the Gap Between Knowing and Doing

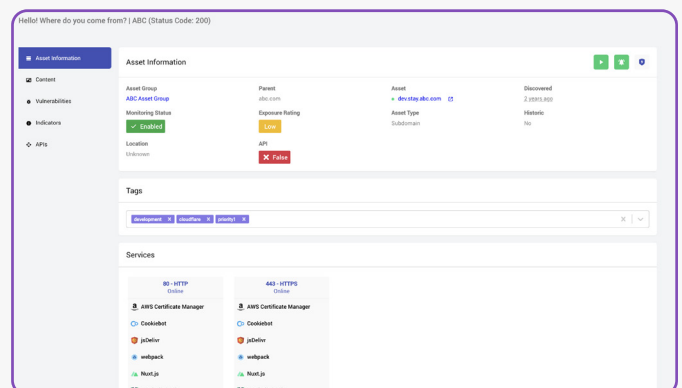

Knowing often isn't enough. Assetnote's discovery engine identifies assets and enriches this information to provide intelligence with which you can take meaningful action.

As Fast As Your IT Environment Changes

Modern environments have a steady flow of changes, updates, ephemeral workloads. With discovery taking place hourly we keep up with your attack surface.

Up-To-Date Asset Enrichment For Contextual Decision Making

Assets are presented alongside information derived from open, closed and proprietary sources to provide context and decision critical information to help you take action with a full understanding of your attack surface.

Get In Touch For A Live Demo

Don't wait until your next quarterly penetration test (or worse a breach) to find out you have a security issue. Come book a live demo with us today
