

Radically change the
way you secure your
attack surface.

True Attack Surface Management

With today's dynamic attack surfaces and an evolving threat landscape, organisations must move away from legacy point in time assessments and tools that run on a less frequent cadence to maintain visibility.

Complete Visibility of Your External Footprint

Utilising advanced and proprietary reconnaissance techniques, the Continuous Security platform continuously maps out the assets that make up an organisations evolving external attack surface. Stay in sync with your evolving attack surface by continuously discovering new assets and track changes every hour.

You Can't Protect What You Don't Know About

Using agent-less discovery techniques, the platform discovers new assets and automatically tracks existing assets as they evolve so your visibility is always up-to-date.

Gain an Attacker's Insight

Built from the ground up by offensive security experts, our platform uses the offensive mindset of hackers to deliver real insight into an organisation's exposure.

Stay Ahead of the Attackers

Combining continuous, hourly discovery and security monitoring, helps you identify new security issues in real-time and aids security teams in prioritising their efforts.

Real-Time Vulnerability Detection

True Attack Surface Management is a combination of continuous discovery and continuous monitoring of the attack surface to identify changes and security exposure in real time. Cut through the noise of traditional tools by programmatically validating the exploitability of every issue, to ensure Security Teams can respond quickly to new issues.

Name	Category	Subcategory	Asset	Port	Severity	Custom Severity
WordPress Setup Exposed	Server Security Misconfiguration	Insecure Exposure of Administrative Functionality	booking.ab.c.fr	443	Critical	Critical
JIRA Information Disclosure - Filters	Server Security Misconfiguration	Insecure Cloud Infrastructure Configuration	test.jira.abgroup.com	443	Low	Low
Subdomain Takeover (Elastic IP)	Server Security Misconfiguration	Insecure DNS Configuration	safeq.ab.com.tr	443	High	High
Remote Command Execution (Sitecore Report.aspx)	Injection and Output Encoding	Remote Code Execution	qa-origin.test.taab.com	80	Critical	Critical
WordPress User Information Disclosure	Server Security Misconfiguration	Insecure Web Server Configuration	specjalista-s.przedlady.pr.odbitkow-ha.nkowych.ab.c.pl	443	Low	Low
JNDI Injection via Log4j (CVE-2021-4428)	Injection and Output Encoding	Remote Code Execution	reports.test.aab.com	443	Critical	Critical
Server Side Request Forgery (Microsoft)	Server Security	Use of Unpatched	autodiscover	443	Critical	Critical

Get In Touch For A Live Demo

Don't wait until your next quarterly penetration test (or worse a breach) to find out you have a security issue. Come book a live demo with us today
